Outbound Call AI Agent

NU Launch Labs · Team kickoff, Wed Oct 21, 2026 · Team: Coco (lead), Harper, Steve, Siddhi, Kevin · Demo: early December

THE PROBLEM

Some things still need a phone call, like booking or cancelling an appointment. But we're often in class or at work and can't step away to sit on hold or talk it through.

WHAT'S OUT THERE

AI agents can already place calls for you. When they hit a question they can't answer, they hang up, come back to you, and someone has to call again. Coco tested an existing agent (via Whop) and saw exactly this. **Next:** test more tools to confirm it's a pattern.

SCOPE

- **Start with:** booking or cancelling a restaurant reservation or a doctor's appointment
- **Out of scope:** bank calls. Too much personal info to verify, and banks may block AI callers
- **Stretch:** calendar integration so the agent books into your open slots

HOW WE'LL WORK

Two workstreams run side by side in October: **competitor research** (test existing agents, find gaps and our angle) and **design + spec** (requirements and a clickable flow). **Roles are open, we'll decide together.**

KEY CONSIDERATIONS & OPEN DECISIONS

- **Privacy:** what info do we store, where, and for how long? What can the agent share on a call, and what always needs your OK first?
- **AI disclosure:** say it's an AI at the start of each call? Rules vary by state and are still changing, so we lean toward always disclosing. Same for call recording: Massachusetts requires everyone's consent.
- **Onboarding:** collect basics once (name, birthday, address, insurance) so you never repeat yourself.
- **Notifications:** a browser tab is easy to miss in class. Do pings also go to your phone?
- **No reply?** if you don't answer a ping in time, does the agent hold, call back later, or use a default?
- **Our edge:** which competitor gets closest, and where exactly do they fall short?
- **First user:** students, working professionals, or both?

TIMELINE (PLANNED BACKWARDS FROM THE DEMO)

Research, design, spec	Requirements + tech doc	Build	Test + fix	Done + demo prep	Buffer	Demo
Oct 21 – 31	**Nov 2 – 6**	**Nov 9 – 13**	**Nov 16 – 20**	**Nov 23 – 27**	**Nov 30 – Dec 4**	**Early Dec**
Competitor research, design, detailed spec. **First share-out end of Oct.**	Tweak requirements, write tech doc, pick the stack	Build the core call + pause-and-ask loop	Real test calls, fix bugs	Feature-complete. Slides, script, rehearse (Thanksgiving Thu)	Slack for anything that slips	Show what we built

LET'S DISCUSS TOMORROW

- What excites each of you about this, and what do you want to learn or build?
- Which competitors have you already seen or used?

OUR IDEA: THE APP AT A GLANCE

A **personalized web app** (you're at your desk) that places calls for you. It starts each call with your context, **pauses instead of hanging up** when it's missing info, and pings you for a **one-tap reply**, with **human-in-the-loop (HITL)** controls throughout.

1 Onboarding
- Quick first-time setup
- Fills in your profile
- Explains the agent will say it's an AI

→

2 Profile
- Name, birthday, phone, address
- Availability, party size, doctors
- Per field: **share freely** or **ask me first**

→

3 Create call
- **Template:** restaurant / doctor, book or cancel
- **Custom:** type instructions
- **Pre-call review**, then Start

→

4 During call
- Live transcript
- AI pings, you tap a reply
- HITL approvals
- Take over or hang up

→

5 End call
- Summary + decisions made
- Status: booked, cancelled, follow-up
- Retry, or add to calendar (stretch)

Highlighted step = where we're different. Past calls are saved in **Call history**, so you can call again or follow up.

Under the hood

Web app	→	Phone line	→	Speech-to-text	→	LLM "brain"	→	Text-to-speech
Shows the live transcript, pings, and controls		Telephony service that dials the real number (e.g. Twilio)		Turns what the other person says into text		Decides what to say next, and when to pause and ping you		Turns the AI's reply back into a voice

These run in a loop for every turn of the conversation. Voice AI platforms (e.g. Vapi, Retell) bundle most of these pieces, which could speed up build week.
